DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3 and 14-15 are rejected under 35 U.S.C. 102(e) as being unpatentable by Nelson, JR. et al (20040147287).

3. Regarding claim 1 Nelson, JR. et al teaches a wireless LAN access point comprising (figs. 1-3):

a directional antenna, an interference detector detecting interference effected by another wireless LAN access point on said directional antenna (para. # 00150019-0020,0046); and

a direction adjusting mechanism adjusting a maximum gain direction of said directional antenna in response to said detected interference (para. # 00150019-0020,0040,0046, 0051).

Regarding claim 2 Nelson, JR. et al teaches further comprising a control unit determining an optimized direction in response to the detected interference, wherein said direction adjusting mechanism adjusts a maximum gain direction of the directional antenna to the optimized direction, and wherein said control unit determines said

optimized direction such that said directional antenna is free from said interference effected by said other wireless LAN access point (para. # 00150019-0020,0040,0046, 0051).

Regarding claim 3 Nelson, JR. et al teaches wherein said interference detector detects a strength of said interference from said other wireless LAN access points, and wherein said controller unit determines said optimized direction in response to said detected strength of said interference (para. # 00150019-0020,0040,0046, 0051).

Regarding claim 14 Nelson, JR. et al teaches a method for operating a wireless LAN access point including a directional antenna, said method comprising (figs. 1-3): detecting interference effected on said directional antenna by another wireless LAN access point (para. # 00150019-0020,0040,0046, 0051); determining an optimized direction in response to said detected interference (para. # 00150019-0020,0040,0046, 0051); and adjusting a gain maximum direction to said optimized direction so that said directional antenna is free from said interference (para. # 00150019-0020,0040,0046, 0051).

Regarding claim 14 Nelson, JR. et al teaches a method for operating a wireless LAN access point including a directional antenna, said method comprising (fig. 1): detecting a strength of interference effected on said directional antenna by another wireless LAN access point (para. # 00150019-0020,0040,0046, 0051); determining an optimized direction in response to said detected strength of said interference (para. # 00150019-0020,0040,0046, 0051); and adjusting a gain maximum direction to said optimized direction (para. # 00150019-0020,0040,0046, 0051).
